Precision in Perfection

For almost 60 years Berger Holding has lived and breathed this philosophy - precision in perfection. Established in 1955 by Alois Berger, our future-oriented enterprise has been growing consistently through continuous innovation. Starting out from humble beginnings, Berger Holding succeeded in becoming the worldwide largest family-run manufacturer of precision-machined parts. Currently, our enterprise has a staff of over 3.000 people in 12 locations.

Berger supplies high-precision, complex, ready-to-install precision-turned, milled and ground parts to renowned companies all over the world, with diameters of 2 mm to 1.800 mm and in lengths of up to 3.000 mm, as well as assemblies, ball screw drives and motor spindles, no matter if you need only one component or a million.

Berger can also offer you our decades of experience in the production of highly complex, ready-to-install turned and milled parts as a full service package.
